Outline

- Introduction
- Background
 - Multiplicity Options
 - CGM and CGMF
 - LLNL Fission Library and FREYA
- Verification Strategy
- Numerical Results
 - Averages
 - Distributions
 - Correlations
 - Secondary Photon Bug Fixed
- Conclusions

UNCLASSIFIED

Introduction

- Application of interest
 - Global security and nuclear nonproliferation
 - Detection of special nuclear material (SNM)
 - Warhead measurement campaign (WMC)
 - Passive and active interrogation techniques
 - Coincident neutron and photon leakage
- Key issues
 - Average nuclear data quantities are insufficient
 - Cannot predict correlated signatures of shielded SNM
- Approach to obtain predictive capability
 - Use transport code MCNP for modeling neutrons and photons
 - Need microscopic fission event information
 - Fission event generators are under development
 - Implement in MCNP and compare to experiments

UNCLASSIFIED

Background

- In tabulated nuclear data libraries (i.e. ENDF/B-VII.1):
 - Average secondary neutron and photon information can be available
 - Average multiplicity, $\bar{\nu}$
 - Average spectrum, $\chi(E)$
 - Average energy-angle spectrum, $\chi(E, \theta)$
 - Generally, high-dimensional distributions of secondary particles are unavailable
 - Multiplicity distribution, $P(\nu)$
 - Multiplicity-dependent emission spectra, $\chi(\nu, E)$
 - Multiplicity-dependent energy-angle emission spectra, $\chi(\nu, E, \theta)$
 - Neutron-neutron, neutron-photon and photon-photon correlations
 - Too much data to measure, evaluate and tabulate!
- Default MCNP uses average quantities
 - In some cases, consider this a nuclear data “variance reduction” technique
 - Good for integral quantities, like flux and effective multiplication
 - Bad for studying detailed particle emission physics

UNCLASSIFIED

Multiplicity Options

- MCNP6.1.1 contains two (low-energy) event generators:
- LLNL Fission Library¹
 - Spontaneous, neutron-induced and photo-fission
 - Fission Reaction Event Yield Algorithm (FREYA)² isotopes:
 - Spontaneous: ^{238}U , ^{240}Pu , ^{244}Cm and ^{252}Cf
 - Neutron-induced: ^{233}U , ^{235}U and ^{239}Pu
 - When available, FREYA generates secondary neutrons and photons
- Cascading Gamma-ray Multiplicity (CGM)³ - LANL
 - Generates secondary particles from a variety of reactions
 - No fission! (CGMF under active development)

UNCLASSIFIED

CGM and CGMF

- CGMF is a superset of CGM with an added fission reaction capability
- Fission fragments are sampled from a joint probability distribution function of mass (A), charge (Z) and total kinetic energy (TKE)
- Uses Hauser-Feshbach statistical theory of nuclear reactions
- Neutron / photon competition is treated during evaporation from fission fragments
- Monte Carlo is used to sample each step in the de-excitation process

⁴B. Becker, P. Talou, T. Kawano, Y. Danon, and I. Stetcu, *Phys. Rev. C*, 87, 014617 (2013).

UNCLASSIFIED

LLNL Fission Library and FREYA

- FREYA is LLNL's fission event generator
- In MCNP6, it is accessible through LLNL Fission Package
- The LLNL Fission Package includes more tabulated and fitted data used for lesser known isotopes FREYA can't presently handle
- FREYA uses a Monte Carlo Weisskopf approach
 - Neutrons emitted by sampling from Weisskopf spectrum
 - After neutrons are done emitting, gamma rays are emitted from residual energy
- Computationally more efficient than Monte Carlo Hauser-Feshbach

UNCLASSIFIED

Verification Strategy

- Prove the models are implemented as intended
 - Assume models are verified against theory
- Check secondary neutron and photon emission quantities
 - Averages
 - Multiplicity: $\bar{\nu}_n$, $\bar{\nu}_\gamma$
 - Energy: $\bar{\chi}_n$, $\bar{\chi}_\gamma$
 - Distributions
 - Multiplicity: $P(\mathbf{v}_n)$, $P(\mathbf{v}_\gamma)$
 - Energy: $\chi_n(E)$, $\chi_\gamma(E)$
 - Correlations
 - Multiplicity: $P(\mathbf{v}_n, \mathbf{v}_\gamma)$
 - Angular: $n(\vec{\Omega}) \cdot n(\vec{\Omega})$
- Standalone code versus MCNP integrated code results

UNCLASSIFIED

Numerical Results

- Compare standalone against MCNP6 integrated
 - CGMF and FREYA
 - Spontaneous and neutron-induced fission
 - Roughly 1E6 fission events
- Simple test problem description
 - Force collision at source location
 - Secondary particles stream without collision
 - Use PTRAC to calculate results
- Quantities for comparison
 - Averages
 - Distributions
 - Correlations
- Secondary photons bug fixed

UNCLASSIFIED

Averages

- Standalone versus integrated results are in agreement within statistics!

CGMF

Quantity	$^{252}\text{Cf}(\text{sf})$		$\text{n}(1.0273 \text{ MeV})+^{239}\text{Pu}$		$\text{n}(\text{thermal})+^{235}\text{U}$	
	Standalone	MCNP	Standalone	MCNP	Standalone	MCNP
$\bar{\nu}_N$	3.7415(13)	3.7439(16)	3.0512(11)	3.0481(11)	2.4315(11)	2.4305(11)
$\bar{\chi}_N$	2.0927(8)	2.0920(10)	2.0322(9)	2.0329(9)	1.9726(9)	1.9740(9)
$\bar{\nu}_\gamma$	8.2721(32)	8.2680(37)	7.9039(31)	7.9053(31)	7.4328(30)	7.4425(30)
$\bar{\chi}_\gamma$	0.8561(3)	0.8558(3)	0.9287(3)	0.9293(3)	0.9139(3)	0.9131(3)

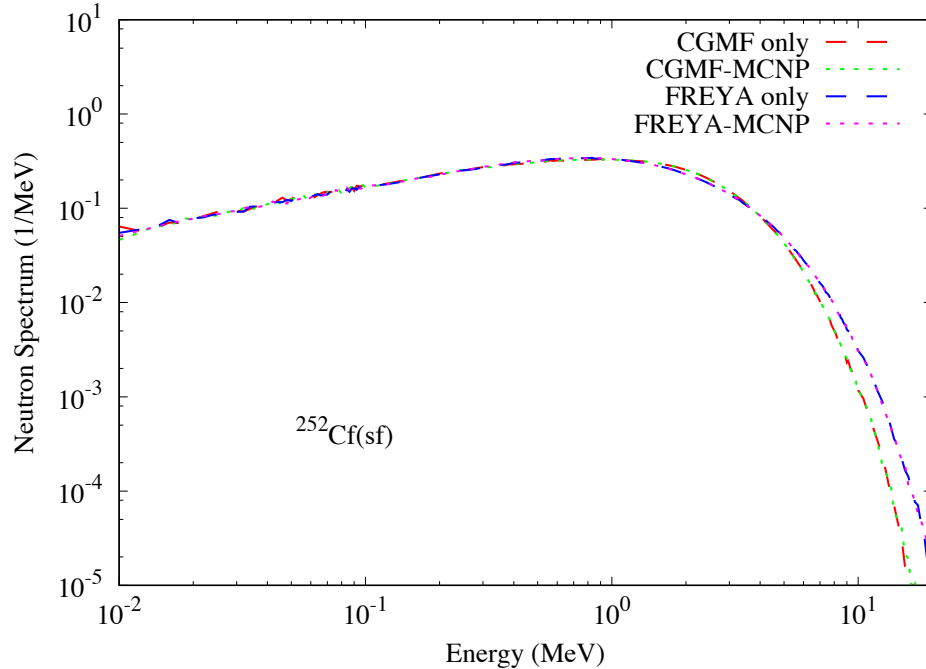

FREYA

Quantity	$^{252}\text{Cf}(\text{sf})$		$\text{n}(1.0273 \text{ MeV})+^{239}\text{Pu}$		$\text{n}(\text{thermal})+^{235}\text{U}$	
	Standalone	MCNP	Standalone	MCNP	Standalone	MCNP
$\bar{\nu}_N$	3.7415(12)	3.7402(12)	2.7745(10)	2.7753(10)	2.2014(10)	2.2011(10)
$\bar{\chi}_N$	2.2491(10)	2.2483(10)	2.0272(10)	2.0276(10)	1.8692(10)	1.8689(10)
$\bar{\nu}_\gamma$	8.0961(30)	8.1055(30)	7.1463(26)	7.1453(26)	6.7010(25)	6.7034(25)
$\bar{\chi}_\gamma$	0.8929(3)	0.8924(3)	0.9922(3)	0.9918(3)	0.9770(3)	0.9774(3)

UNCLASSIFIED

Distributions

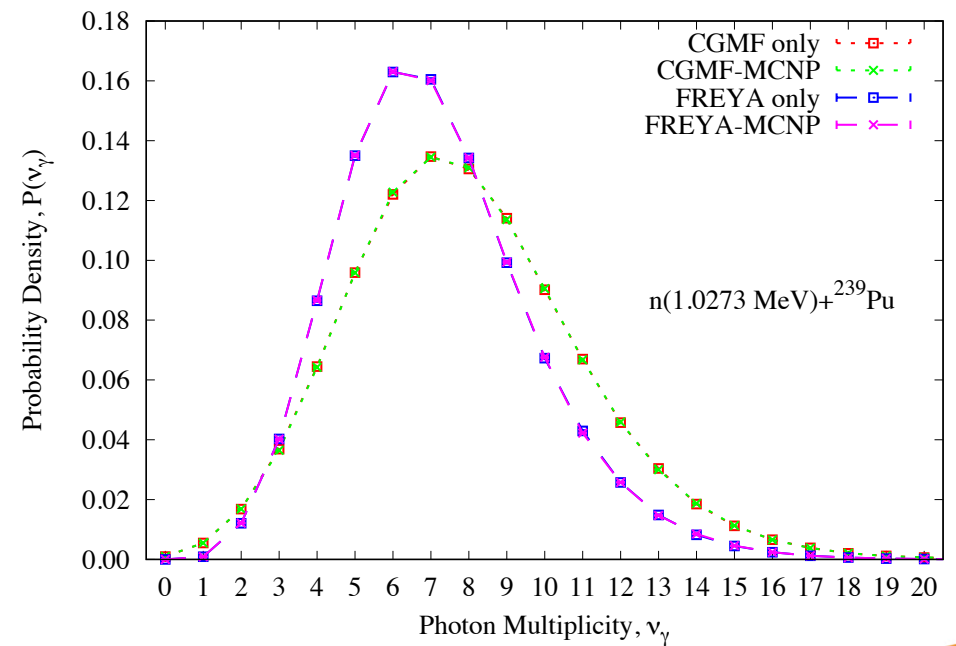

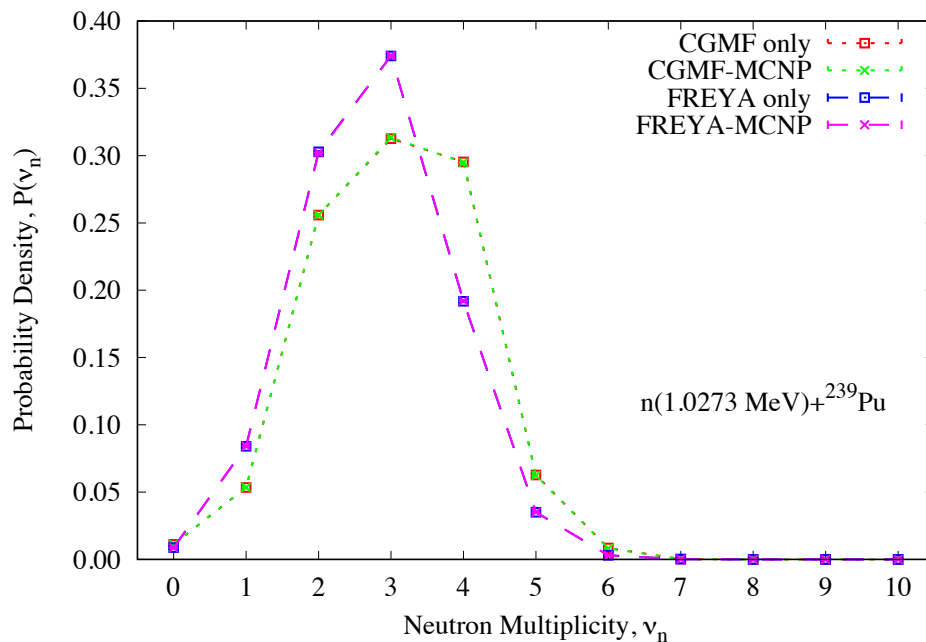

- Energy spectrum of neutrons and photons
 - Cf-252 (sf), Pu-239 (n,f) and U-235 (n,f)

UNCLASSIFIED

Distributions

- Multiplicity of neutrons and photons
 - Cf-252 (sf), Pu-239 (n,f) and U-235 (n,f)

UNCLASSIFIED

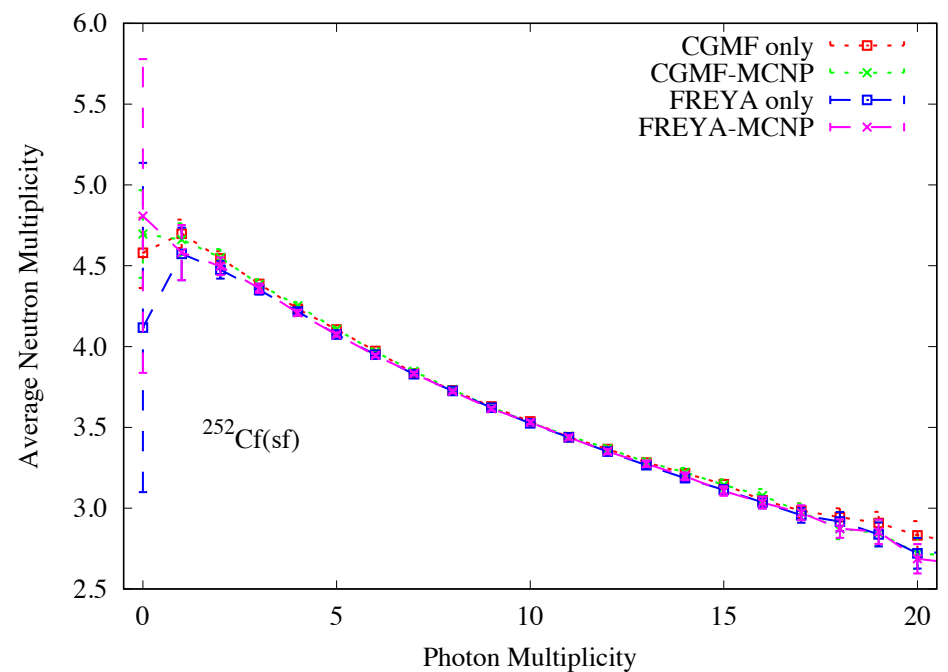

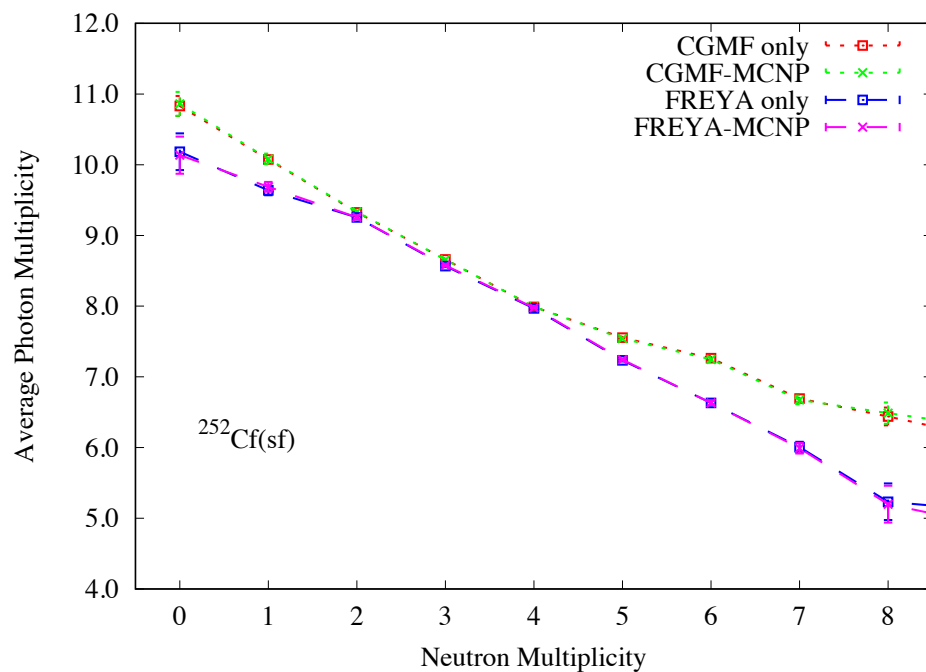

Distributions

UNCLASSIFIED

Correlations

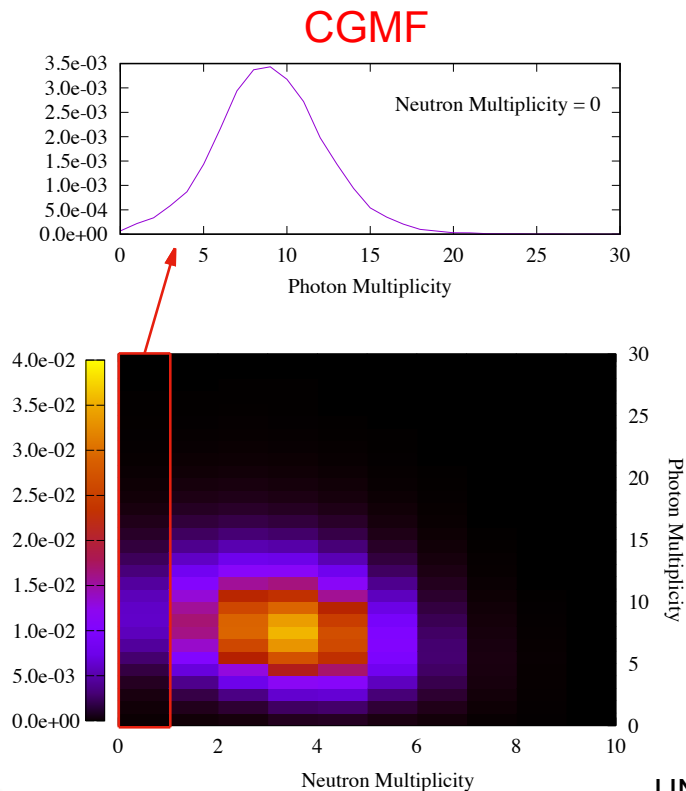

- Multiplicity correlations
- Tagging on number of neutrons or photons observed

UNCLASSIFIED

Secondary Photon Bug Fixed

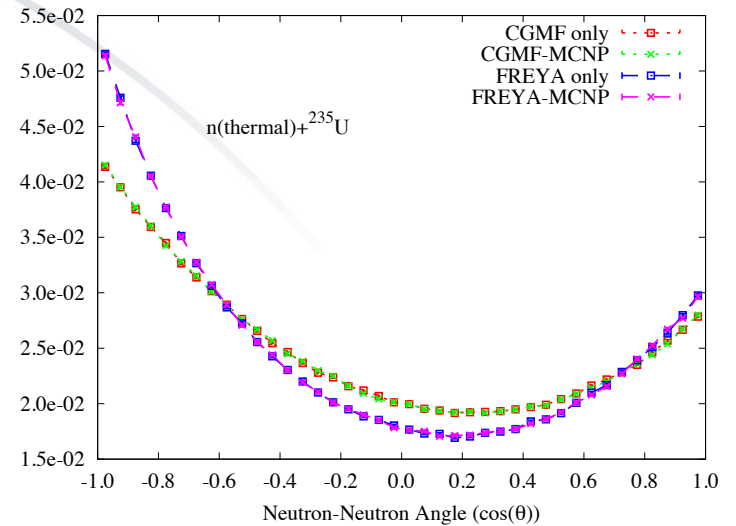

- Previously when zero neutrons emitted → zero photons emitted
- MCNP6.2 includes this bug fix

UNCLASSIFIED

Correlations

- Angular neutron-neutron correlations
 - Cf-252 (sf), Pu-239 (n,f) and U-235 (n,f)

UNCLASSIFIED

Conclusions

- Integrated fission event generator models appear to be implemented correctly!
- Next version of MCNP 6.2 will contain two new fission event generators
 - CGMF from LANL
 - FREYA from LLNL/LBNL

THANK YOU!

UNCLASSIFIED
