# Outline

---

## Introduction & Motivation

## MCNPTools Summary

- Software Overview

- Pre-existing Utilities

- New Utility: l3d2vtk

- Building, Testing, Installing, and Using

## Example Interactive 3-D Visualization Workflow

- Problem Description

- Cards to Produce LNK3DNT File

- Visualization Techniques

## Summary & Future Work

# Introduction & Motivation

---

***Objective: Provide a utility (among other utilities) that improves MCNP analysis post-processing and visualization capabilities.***

- ▶ Much recent work to improve MCNP post-processing and visualization
  - ▶ Goals: Portable, open, easily interrogated by a user, no dependencies
    - ▶ Mesh tally-to-VTK conversion
    - ▶ EEOU-to-VTK conversion (Kulesza and McClanahan, 2019)
  - ▶ Enables interactive, 3-D, visualization environments (e.g., ParaView)
- ▶ Why do this?
  - ▶ Provide physical insight into behaviors and trends
  - ▶ Error mitigation (easier to “see” errors than “read” them)
  - ▶ Improved communication with collaborators
- ▶ Why now?
  - ▶ Analyses are getting ever-more complicated
  - ▶ More flexible build, test, and deployment capabilities

# MCNPTools Overview

---

- ▶ Born out the continual need to process MCNP outputs
- ▶ Provides object-oriented access to MCNP output files
  1. mctal files
  2. meshtal (column-formatted Type B) files
  3. ptrac files
  4. LNK3DNT files
- ▶ Written in C++ and bound to Python (and Perl) via SWIG
  - ▶ Its true power: easily create custom post-processing applications
- ▶ Also includes utilities for common tasks
- ▶ First distributed via RSICC as version 3.8.0 with MCNP 6.2
  - ▶ Currently at version 5.1.0
  - ▶ Currently pursuing open-source release
- ▶ Discussed in MCNP Introduction and Intermediate Classes

## Pre-existing MCNPTools Utilities

---

- `l3dinfo` Prints information about a LNK3DNT mesh file such as the geometry type, size of the mesh, and number of materials,
- `l3dcoarsen` Coarsens a LNK3DNT mesh to reduce the overall number of mesh voxels and re-smears material mixing fractions,
- `l3dscale` Scales a LNK3DNT mesh (e.g., to convert from centimeters to inches),
- `mctal2rad` Converts a text-based synthetic radiograph tally to a TIFF image,
- `mergemctals` Merges statistically independent tally files by computing aggregate mean and relative uncertainty values,
- `mergemeshitals` Merges statistically independent type B mesh tally files by computing aggregate mean and relative uncertainty values, and
- `meshtal2vtk` Converts a mesh tally file to one or more **ASCII XML-based StructuredMesh VTK (.vts) files.**

## New Utility: l3d2vtk (MCNPTools 5.1.0)

- ▶ Converts spherical, cylindrical, and Cartesian LNK3DNT files to ASCII XML-based StructuredMesh VTK (.vts) files
- ▶ C++ application subject to serial processing

# Building, Testing, and Installing l3d2vtk

---

- ▶ MCNPTools is provided with pre-compiled binary executables
  - ▶ Python wheel (.whl) files are also provided
- ▶ MCNPTools and its utilities are configured with CMake
- ▶ Linux & macOS build, test, and installation steps:
  1. mkdir build && cd build
  2. cmake -DCMAKE\_BUILD\_TYPE=Release ..
  3. make
  4. ctest
  5. make install
- ▶ Windows build, test, and installation via CMake GUI
- ▶ It is expected that all ctest tests pass, if not: seek help

# Using l3d2vtk

```
1 > l3d2vtk --help
2 USAGE: l3d2vtk [--version] [--verbose] <LNK3DNT> [OUTPUT]
3
4 l3d2vtk converts a LNK3DNT file into an XML-formatted
5 StructuredGrid (.vts) VTK file.
6
7 OPTIONS:
8
9 --version, -v : Print version and exit
10
11 --verbose, -V : Produce standard output giving status
12                 (Default: False)
13
14 LNK3DNT       : LNK3DNT file name to convert
15
16 OUTPUT       : Converted LNK3DNT output name
17                 (Default: lnk3dnt.vts)
```

```
1 > l3d2vtk -V godiva_lmm_eighth.lnk
2 Processing file: godiva_lmm_eighth.lnk
3 Found 3-D Cartesian (x,y,z) geometry.
4 Reading materials...
5 Constructing VTS file...
6 Writing VTS file...
7 Done.
```

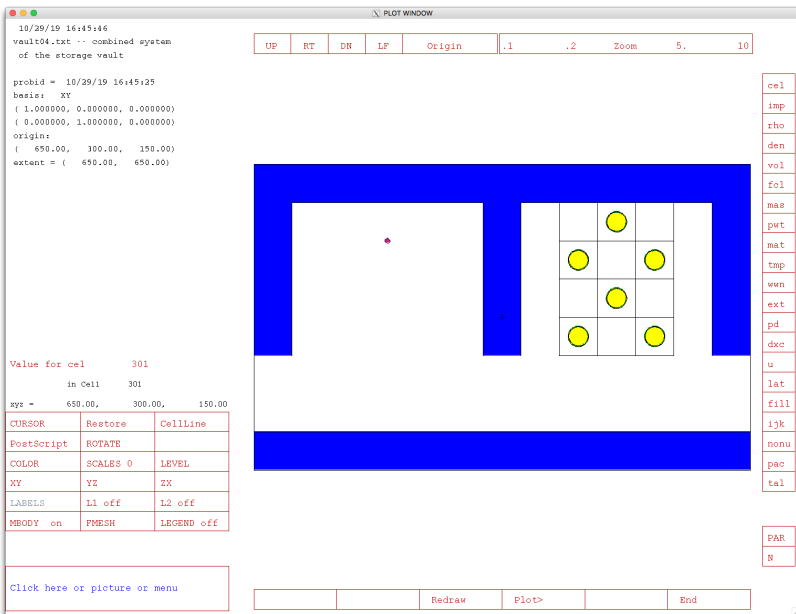

## Example Problem Description

---

- ▶ Fissile Material Storage Vault
  - ▶ A room has an incomplete array of  $\text{PuNO}_3$ -containing cylindrical tanks
  - ▶ A room has a small Pu sphere 1.5 m from the floor
  - ▶ Relatively few neutrons will travel from one room to another
    - ▶ Loosely coupled system
  - ▶ Adapted from an MCNP Criticality Class Case Study
    - ▶ Mesh tally added consistent with LNK3DNT mesh
- ▶ Used as an example here because it
  - ▶ Is uncomplicated but of a size scale that is “interesting”
  - ▶ Demonstrates representing curvature on a Cartesian mesh

# ParaView Interface Overview

# Load Geometry

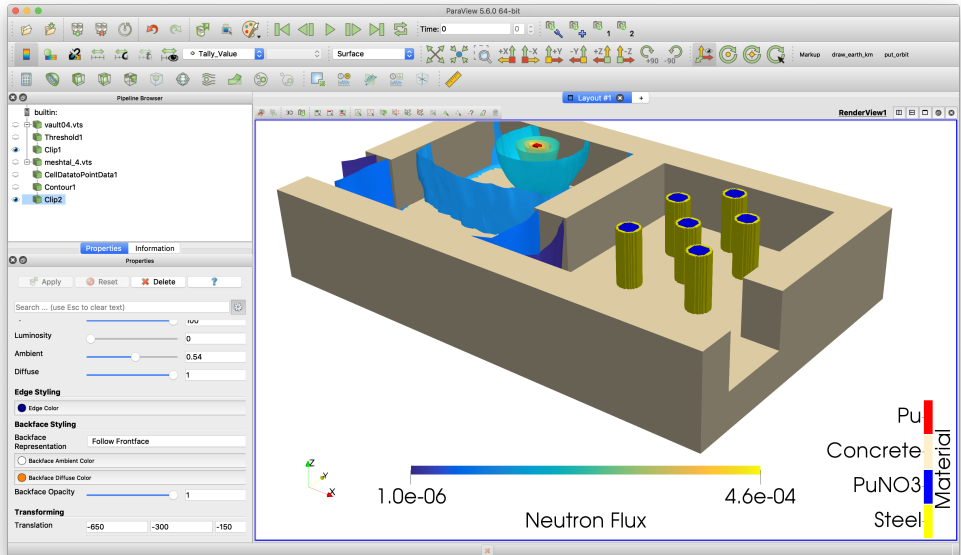

# Clip / Style Geometry & Legend

The screenshot displays the ParaView 5.6.0 64-bit interface. The main window shows a 3D rendering of a complex structure with a clip plane. The structure is composed of several parts, including a large rectangular base and several cylindrical columns. The clip plane is positioned to show the interior of the structure. The material legend on the right side of the interface lists the materials used in the model:

Value	Annotation
2	Pu
3	Concrete
4	PuNO3
5	Steel

The legend also includes a vertical bar with the text "Material" and a color key for "Pu" (red), "Concrete" (yellow), "PuNO3" (blue), and "Steel" (green). The interface also shows the "Color Map Editor" panel on the right, which allows for customizing the color mapping parameters, including the color space (RGB), color map (Non Color), and color discretization (Discretize).

# Insert Mesh Tally, Reformat as Isocontours, and Rescale

# Summary & Future Work

---

## Summary

- ▶ Provided update on latest MCNPTools capabilities and plans
- ▶ Presented new LNK3DNT-to-VTK (l3d2vtk) conversion utility
  - ▶ Also demonstrated mesh tally-to-VTK (meshta12vtk) conversion utility
- ▶ Showed how to combine mesh tally results and voxelized geometry
  - ▶ ParaView used herein
  - ▶ Any application that supports VTK is permitted

## Future Work

- ▶ Migrate MCNP output files to more-common HDF5-based formats
  - ▶ Runtape, ptrac, UM EEOU, mesh tally
- ▶ Create interactive 3-D representation of CSG
